

Hepatitis A Is Spreading

There is a large hepatitis A outbreak taking place right now in many areas of Michigan. Hepatitis A is a serious liver disease caused by a virus that is found in the feces (poop) of infected people. Hepatitis A can easily spread from person-to-person and causes liver disease that lasts from a few weeks to several months. Many people infected with hepatitis A need to be hospitalized and in some cases, **people die because of hepatitis A.**

What are the symptoms of hepatitis A?

**TO PREVENT HEPATITIS A:
Wash Your Hands Often
Get Vaccinated For Hepatitis A**

You should be vaccinated if any of the following apply to you:

- * You are a man who has sex with men.
- * You use any kind of illegal drugs or take drugs differently than prescribed.
- * You have been in jail recently.
- * You are homeless or move from place to place a lot.
- * You work with or spend a lot of time with the high risk groups listed above.
- * You might have been exposed to the hepatitis A virus in the past two weeks.
- * You travel or work in an area outside the U.S. where hepatitis A is common.
- * You have (or will have) contact with an adopted child within the first 60 days of the child's arrival from a country where hepatitis A is common.
- * You have a blood clotting-factor disorder (for example, hemophilia).
- * You have chronic liver disease.

For more information or to schedule a vaccine appointment, contact your local health department:
