

DHD#10 REPORTS PUBLIC EXPOSURE SITE AT A MANISTEE RESTAURANT ON JULY 11 & 12

July 21, 2020 – District Health Department #10 (DHD#10) is reporting that an individual who recently tested positive for COVID-19 could have exposed others at River Street Station in Manistee on July 11 and July 12.

If you were at this location on July 11 or July 12, you should self-monitor for symptoms for 14 days from the possible exposure date. Anyone that is self-monitoring as a result should keep away from family, close contacts, and roommates as much as possible. COVID-19 symptoms include fever or chills, cough, fatigue, shortness of breath, muscle aches, sore throat, nausea, vomiting, diarrhea, and recent loss of taste or smell. Anyone experiencing one or more of these symptoms should immediately quarantine themselves and contact a medical provider.

While DHD#10 will release information about public exposure sites when it is determined through investigation that it's not possible to identify all close contacts, everyone needs to remember that approximately 40% of COVID-19 cases appear to be asymptomatic. Asymptomatic cases are especially difficult because they are not sick and therefore not staying home. Additionally, contagious individuals can spread virus prior to experiencing symptoms.

“As COVID-19 cases continue to occur in our small rural communities, it is more important than ever for us all to follow the prevention measures: wearing masks or face coverings, social distancing, and following proper hygiene.”
